Post-Op Instructions: Crown Insert

For the **first 24 hours** after cementation of your crown:

- Do not eat anything sticky or chewy.
- When flossing, pull the floss out the side, do not pop it up through the contact point.
- After 24 hours you can treat your crown like any other tooth.

If you notice that your bite is off, let us know immediately. A permanent crown will not “wear down”. You could end up with a toothache, or temperature sensitivity if the bite is not correct.

If you were numbed to place the crown, be careful not to bite yourself. Also, don't drink or eat anything hot until the anesthetic wears off, as you will have difficulty gauging the temperature and could burn yourself.

If you have any questions or concerns about your crown, please feel free to call us at 512-847-8934.
